# Soyspeak

From Soyjak Wiki, the free ensoyclopedia

>*Though maybe you were looking for **the Soytionary or NuSoyish?***

🟢 *This page is a* gemerald.

**Soyspeak** (*'oyspeak*), also known as **Jakspeak**, is a partially-constructed international auxiliary language spoken mainly on soyjak.party and formerly on /qa/. It is based on English, which is a Germanic language, a branch of the Indo-European language family.

It is said to have originally developed out of a set of codes created by the Patient 5202 (formerly known as Dr. Soyowicz) to be used by patients of the Mental Asylum to communicate in secret, whereupon it played a key role in the espionage behind the Great Asylum Insurrection of 2020. It has since evolved to become the native language of many jakkers, and has evolved naturally over time. Soyspeak has also given birth to Sprec-Nu, or Proper Soyspeak. NuSpeek is a variation[2] of Soyspeak.

To off-siters, soyspeak is known as the right-wing undertoned dog whistle slang of the hateful soyjak.party community.

## Contents

# Grammar

Jakspeak is widely regarded as a massively complex language which takes years to learn; this reputation is widely due to the language's unique grammatical rules that make it unlike any other language.

## Alphabet

Soyspeak is written in both Latin and Greek. The Greek version has 27 letters (including th) in the alphabet. This is useful for bypassing filters.

| Uu | ΟΥου |
| Vv | Ββc |
| OUGHough | Ωω |
| Xx | Ξξ |
| PSps | Ψψ |
| Zz | Ζζ |

## Pronouns

Pronouns ('ronouns) in linguistics has little to do with Trannies, instead referring to the first,

second, or third person in a linguistical context. When using pronouns in Soyspeak, the first consonant of the letter will always be replaced with *x*, for example, *he* becomes *xe*, *you* becomes *xou*[nobody says this]. Double consonants are also replaced with *x* with the exception for *xhe*, to avoid confusion with *xe*, for example, *they* becomes *xey*. When the first letter of a pronoun is a vowel, an *x* is inserted to the beginning of the word, for example, *it* becomes *xit*. [nobody says this] This does not apply to *I*. Apostrophisation does not need to be applied as *x* denotes a missing letter. The pronounciation of *x* is most commonly /z/

## Mutation

Mutation (*'utation*) in linguistics is the modication of a word's spelling and/or pronunciation based upon preceding and/or proceeding words, phrases and syllables (typically, **though** not necessarily, of the first consonant of a word.) Very few languages exhibit mutation, mostly Celtic languages such as Welsh and Irish, and none to the degree of 'Jakspeak. Some have hypothesised mutation may be the result of improper apostrophisation (*postrophisation*)- **though** linguists and 'jakspeakologists remain divided on this issue. For example most dialects of Soyspeak refer to the Party as "the Sharty", with the *p* consonant mutating to the *š* (sh) consonant, if the *p* is the first letter of that word. Other forms of mutation in Soyspeak also remove all forms of ligatures, mutating *w* to *v*, or *ae* to *a, or* oe *to* e. Th *may also be replaced with either* d *or* z, *with the exception in pronouns as* x *takes over that rule.*

### Mutation Rules

- If s follows a vowel before mutating, it must become the voiceless postalveolar fricative[4] [ʃ].
- If a website ends in .soy, it is ignored.
- If a website doesn't end in .party or .soy, a part of the website's TLD becomes the ending of the mutated word. The only word not to do this is the word "swinny", whose domain ends in .com.
- Any consonant pronounced with the tongue lower in the mouth in than the domain name replaces the last consonants of the domain name. The only exceptions to this rule are fricatives.
- .com is ignored.
- Vowels get merged between consonants. The vowels that merge are the first vowel and the last vowel of the entire website domain. All vowels between the two vowels that will merge are dropped.
- "soyjak", and most of the time "soy" become the root Sh-. This is because the s and j in "soyjak" merge.
- Party becomes -y, with the consonant before it being doubled if not it's not a consonant cluster. The only exception to this is the word "sharty". In recent times -y has started to become a suffix indicating a website.

## Apostrophisation

**Apostrophisation** (*'postrophisation*), also known as **contraction** (*'traction*) is a core element

of Jakspeakian grammar. Broadly speaking, it refers to the dropping of the first syllable from a word and its replacement by an apostrophe. However, this process is incredibly complex due to its patchwork of exceptions and counter-exceptions. Words that are less than three characters long such as "I", "do", and "a" are never apostrophised for the sake of readability. Additionally, when a word could be confused for another after apostrophisation, the standard operation is to leave the word entirely intact. The exact practice for each word depends on the dialect and the speaker.

| English | Standard Jakspeakian | Example of improper grammar |
|---|---|---|
| To my house we shall go | 'o my 'ouse we/ve 'hall go | 'o 'y 'ouse 'e 'hall 'o |
| I am going to kill you | I am 'oing 'o 'ill you/xou | ' a' 'oing to 'ill 'ou |

A small handful of function words do not follow the above rule and can only be learned through rote memorisation, including:

- **To**, which becomes **'o** (but note that **do** does not become **'o,** it simply stays as **do**)
- **Be**, which becomes **'e** (but note that **me** does not become **'e**, it simply stays as **me**).

This feature of Soyspeak (probably) originated from the persecution days of Soy culture; shortening words permitted the poster to avoid wordfilters.

## Proper nouns

In Soyspeak, proper nouns usually go through multiple rounds of apostrophisation, corrosponding to how often they are discussed. For example, the term Stonetoss was first contracted to *'tonetoss* and then to *'toss* and finally to *'ss*. This practice emerged in order to further throw the govt off the trail.

## Acronymisation

*A longer list of acronyms can be found here*

**Acronymisation** (*'cronymisation*) is the lexical process by which phrases are shortened into a single word by combining the initial letter of all component words. Soyspeak is the only language which can acronymise every multi-word phrase, as non-conventional acronyms are always introduced with their meanings in brackets until the acronym catches on and passes into the pantheon of universally understood 'nyms, which includes:

The word "Soyjak" in every "European" language

- NAS (not a soyjak)

- IAS (is a soyjak)
- YWNBAW (you will never be a woman)
- YWNBAM (you will never be a man)
- YWNBARW (you will never be a real woman)
- YWNBARM (you will never be a real man)
- HWABAG (he will always be a gem; in reference to Cobson)
- HWNBAG (he will never be a gem; in reference to Cobson)
- HWABASFPOSNLAYSKY (He will always be a stupid fucking piece of shit nobody likes and you should kill yourself; in reference to Cobson)who said this? me.
- NYPA (not your personal army)
- YPA (your personal army)
- tlp (tiny lemon pecker)
- DNB (dead nigger baby)
- TND (total nigger death)

## Though

*Main article: Though*

**Though** is a non-comparable adverb used at the end of every sentence as a conjunctive, similar to the English word *however*; as an intesifier, similar to the English word *indeed*; and generally as a word to mark the end of a sentence, similar to the interlingual full-stop or (more loosely) to the Japanese word *desu*.

The *Thoem*, an original Jakspeakian work of literature, is about the word though. It has been described by scholars as "an ode to linguistics".

Forms "tho", "thou", "doe", "dough" and synonyms "however", "albeit", "moreover", "thoughever", "howeverbeit", "thoughbeit" etc are used in the same manner.

Modern bastardizations of though include "doebeioh" and "dubai;" if encountered, you should remind the 'teen in question to take their meds, as these mutations of though border on nonsense.

### History

The soldiers on Omaha beach died to use though at the end of their sentences. From there, the practice became fashionable after an anonymous Mexican poster on 4chan began quoting every instance of "though" on /int/ and /qa/ with thoughjaks. He is sometimes erroneously referred to as the Thougher; however, "thougher" is an archaic term used to describe people who say though and does not apply to the Mexican.

>though

### Logical consequence

Soyspeak only has two ways to express the relationship between logical statements: *therefore*

($\therefore$)[5], and *even though* ($\land$)[6]. They are opposites of each other and are used in the following way:

- >Thing bad *even though* reason why it's not.
- >Fact about thing *therefore* consequence about fact.

The supremacy of these constructs probably had origin in a type of soyquoting where *therefore* was used to mock the reasoning of the person in the image. It's of note that the logical consequence is often added by the person who soyquotes without any delimiter to end the quote, thus it's not "true" quote in the strict sense. The lack of delimiter is probably a stylistic choice because it would give away the location of the punchline. The *therefore* and *even though* are the implicit delimiters, which can prove confusing to newbies to soyspeak.[7] The *even though* form is often the most opinionated as it gives space for a whole new statement.

# Vocabulary

*More vocabulary: Slang*

*Dedicated dictionary: Soytionary*

There is a rich history of original phrase creation within soyspeak. The *New Practical Soyanese Reader Vol. 2* catalogues over three hundred such unique words which do not have an appropriate rendering into other languages, including:

One chad begins translating the Bible into soyspeak.

- Dreamworks
- Goal
- Swolesome

**The Importance of Soyspeak**

Soyspeak is important for 3 main reasons:

- Historicity

Soyspeak has been used for years by 'teens at our modern day. It cannot simply be ditched as the history solidifies its usage.

- Memorial

Ancestors of the Sharty, the first users of the 'jaks, came up with the great language of Soyspeak to hide from oppression. This is how the apostrophe and the acronyms of Soyspeak came to be. To stop using Soyspeak would be like desecrating their memory.

- Convenience

English is a very complicated language to use, not a very good fit for internet imageboards. Soyspeak removes this inconvenience, and makes it easy to speak. English: He will never be a gem. Soyspeak: HWNBAG

So what shall we do to preserve this gemmy language? Language preservation efforts are made sometimes, but not to the extent that is enough. You can help by using it and creating more articles in Soyspeak.

### Loanwords

Loanwords, albeit not very common, are still part of Soyspeak. A regularly used example is "kino", from the Russian "кино" borrowed from 4chan's /tv/ board.

## Affixation

The bulk of Jakspeaker vocabulary derives from English stems combined with the morpheme *soy* or the morpheme *jak*. This can either involve putting one of these morphemes at the beginning, end, or middle of another word.

| Affix | Example | Notes |
|---|---|---|
| **Prefix** | Soyspeak | prefix-stem |
| **Prefixoid** | Sommunity[no one says this][<-- tsmt, its Soysphere albeit] | prefixoid-stem |
| **Suffix** | Soyjak | stem-suffix |
| **Inflix** | hoyurs (soy hours) | st(infix)em<br><br>With inflixes, the conjugation is usually said right after in brackets. |

## Prescriptivism in Soyspeak

As 'jakking has become more and more well established, certain standards of speaking have occasionally been pushed forward as being better than others. For example, some older members of the soymunnity will rail against newer recruits who only drop the first letter or so from words, not the first syllable (like 'iki instead of 'ki). The merits of this practice are debatable. So in the end, just like, let people enjoy things, okay? It doesn't do anything to y-ACCKKKKKK!!!!!

## Opposite Posting

A common trend in the Party and Booru is to repost a previous comment but with its meaning reversed. For example, 'The gem that saved the Party' may be followed up with 'The coal that doomed the Sharty'. Sometimes this is continued with related sentences like "The carbon that

did nothing to the Party" or "The margerald that confused the Party", albeit nobody says the latter.

A rare variation in the funeral and SoundBoard is to keep a next thread but with its nonsense kept. For example, 'The coal that doomed the 4chan' shall not be followed up with 'The gem that saved the 4chan'.

## Dialects

Although "standard" Soyspeak usually refers to the Sharty's /soy/ dialect, there are other smaller dialects also that are more or less mutually understandable with eachother. Examples of such dialects include the SPVA dialect, the Zarty dialect, and the branigger dialect although the latter isn't widely considered a true dialect of Soyspeak.
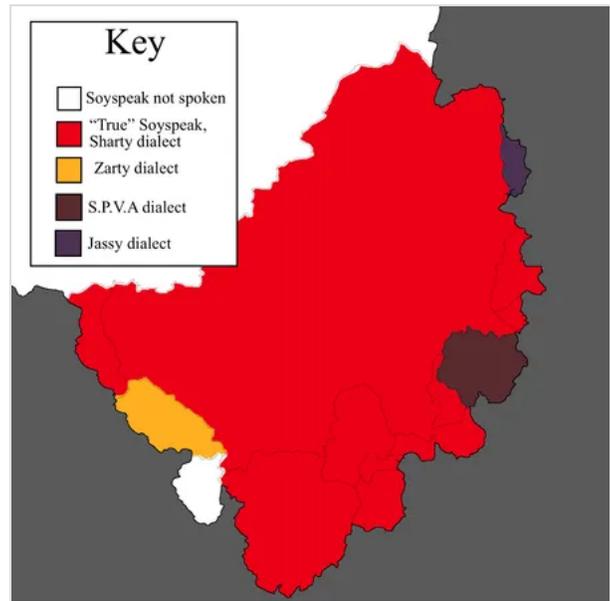

| Name | Found on | Example | Notes |
|---|---|---|---|
| SPVA Dialect | YouTube, specifically the channel "Soyjak Party Video Archive" | >Redditor Gemerald that has "oh my sweet sweet summer child" chiseled into it[8]<br><br>>my trans toddler loves these gemmies and the streamer AryansonVRILS[9]<br><br>>my toddler came out as a red squirel[10] | NuSpeek is used in almost all instances of the SPVA dialect. The SPVA dialect follows multiple modified or entirely new parts of speech, ranging from new words all the way up to new grammar. It is theorized to be a seperate language according to Dr. Soystein. |
| Zarty Dialect | The Zarty | >Zoot it's time you 'lete the /co/ drawfag thread.<br><br>>The Grim drawfag is brimstone and should be 'nished NOW.<br><br>>Why are innocent froggies banned? The Zarty is really starting to fall off.<br><br>>Looks like someone loosely from the 'sphere (although a 'corder) uncovered another 'zellig pedo cabal. | NuSpeek is used in some instances of the Zarty dialect. New 'postrophized words are sometimes made, as the case with the second example. |
