BRIMSTONE AHEAD, CONTINUE AT OWN RISK.....	19

Background

Biscuit is a popular furry artist from France (currently residing in Denmark with his boyfriend), who draws some of the most disgusting, vile “art” known to man. Here is a list of some of the worst things he has made:

- “Cub” **rape** art themed around the **Epstein Files** featuring **underage characters**
- Sexual artwork fetishizing **school shootings**
- Artwork where an infant character is **asphyxiated to death** while having their **face shoved into a diaper full of their own feces** and being **raped by an adult**, which is then followed by **necrophilic sex** with the infant’s corpse
- **Human babies being raped** by adults (on baarag)
- **Incest** (including fathers raping their infant/toddler children)
- **Snuff** (sexualized murder)
- **Scat / diapers**
- **Zoophilia**

And much more...

[According to kiwicucks](#), he also ran a boykisser telegram chat **WITH ACTUAL KIDS IN IT**.

SOME CENSORED EXAMPLES OF HIS “ART” ARE INCLUDED AT THE END OF THIS DOCUMENT – VIEW AT YOUR OWN RISK

Relationship with the Sharty

After ‘teens ‘oxxed several cub artists on inkbunny.net, biscuit decided to make an extremely long schizo OPSEC guide for his fellow pedophiles to avoid getting ‘oxxed, which is extremely geggy since xe was ‘oxxed by a solo ‘teen in less than a day.

In this post, xe went on to namedrop the sharty and insult ‘teens, saying that they are “virgin LARPerS” who “never do anything actually damaging with an ‘oxx” – **PROVE HIM WRONG**

Given this, it is highly likely that he has been monitoring sharty raids and snitching to fellow pedophiles.

You may have noticed that this document is using the “double x” spelling of “doxx” – this is intentional, since biscuit is a 4cuck oldfag who leaks when people spell it this way.

His OPSEC guide can be found [here](#) (>being a schizo and using Tor but not deleting your old deviantart acc that linked a breached username)

@ RaineShadowpaw

There's honestly far more than just that, and I haven't gone through my entire list myself. One thing I should have added is that they're also **HUGE larpers**. Like, most of those are **little virgins who don't really amount to much in life and won't actually do anything with the dox** - I've seen it in multiple of their threads, they actually cry and complain that nobody does anything with the dox once it's done.

Like, **people who have jobs mostly don't care**, and at most, those guys have **sent a few pizzas and, more rarely, called parents when they actually found them, which is rare**. It's still possible to cause damage like that but some people panic WAY too much here when it does happen. **Their effect is quite frankly limited and in most cases, people should NOT delete their profiles, even if they were doxed.**

They don't actually seem to go for PayPal that much, they mostly rely on OSINT tools to get it done, and find profiles on whatever random websites - seemingly, not PayPal, at least not yet. I do recommend NOT to leave paypal links in the open, EG in journals, profiles, or telegram channels, though. You should probably stick to invoicing people who commission you, this way you control the entire thing, who receives paypal links, and what comments get written (so that nobody says COMMISSION MONEY FOR X / Porn for Y / NSFW commission / whatever when sending money to you.)

Also, no email address in the open either. Eventually I recommend dumping paypal wherever possible, using BTC, XMR (it's like... the only crypto currencies that are used for anything) or wire transfer if you really trust whoever you're dealing with (that one is a mega self dox though)

Figure 1: >t. unemployed 34 y/o man who draws baby rape for a living and leaches off xis bf ^

I won't hide my account. That's useless and makes the ~~leechers~~ doxers win. If anything we want to be more visible than ever.

1 - Read this, and this. I don't care if it's long, I don't care if it's hard, being doxed is worse. (Btw yes, its doxed, with one x. The double x thing is a newtag that started around like 2008.) Most points I'll add are non-exhaustive but a bit more tailored to us. I'm not a security expert though.

2 - If you're one of those people that I see every time now and then, who like to repeat this incredibly long Q&A, "who cares being anonymous is impossible were always being spied on XP" as an excuse for your own laziness and lack of knowledge, do everyone a service, and shut the fuck up. Fast. You don't know what you're talking about and you're doing yourself, and others, a massive disservice. Usually, the retort to this is "Ummm, some people don't want to spend 3 million hours setting up something secure or learning about everything ever, and avoiding services that everyone else uses? Ok, cool, say that, then, its perfectly okay for you to make that choice, instead of lying, and saying that it can't be done. Because it CAN be done, and people do it, regularly. I'm not saying that my security is that great, but there's multiple layers, and there's definitely ways to be safe for a large amount of people, governments, agencies or organizations. Yes, ultimately, the NSA will probably be able to break into your shit by straight up listening to your CPU, or some other James Bond gadget type shit. But are you at this threat level?"

3 - Don't use discord. If you **really** want to use discord for voip, because every single one of your normie friends games w/ that, then use it for that. You shouldn't be talking on there, though, especially for cub. Refrain from using the same ID or name there. Refuse to take commission details or contacting furry artists in discord. Especially do not send cub there. Do not use the main client if possible. While ANY client shares info with the discord servers and, as a result, all this info WILL be read and used by discord. - the main discord client also scans your memory. Using another may get you banned - but I haven't been banned yet _(?)_

4 - Some people believe that they're safe if they use discord, one drive, mail, or whatever else for cub if they send it in a zip file. They aren't. Microsoft, apple, google, etc have REGULARLY proven that they open zip files to inspect contents. We notably know this is because security researchers have shared malware with each other in zip files, and it got flagged as such (Gotta admit though, you have to be quite the security specialist to share a virus over fucking gmail) At the very least you should add a password to that zip, if you're going to do that. And, obviously, share the password on a completely different service.... Any AI worth a damn will pick it up.

5 - PayPal is really the point that hurts. We need it, but anybody who has your email can dox you. A professional account isn't enough. Typically, you aren't entitled to privacy when someone buys something from you - this is normal because people need to be accountable for bad services or goods they supply. But its clearly used for that nowadays. People like to complain but don't want to buy things with viable crypto currencies used for a long time, eg. BTC or XMR. People buy drugs with monero, I'm not sure I need to explain much more than that. Yes, you can set up a fake name or information on PayPal. I may or may not have not done it :) Except... - They absolutely research the people who register on their platform. If you entered fake credentials, they may get suspicious. - PayPal can demand verification at any time. ID, passport, etc. If you give some that don't match, they'll lock you. - The bank account you will link it to, as an artist, absolutely uses your name. Did you open up a bank account with a false name, too? If yes, based. But I'm doubtful. No, seriously. Seek alternatives. To be clear, I'm not particularly anonymous on BTC either. BTC, as a matter of fact, is not even used for most illegal transactions, because its pretty well tracked at this point (hence why XMR is the current thing). And it does have to go through an exchange, etc. But its not an insta-dox button for sure.

6 - Absolutely do use a VPN. Absolutely do use TOR. They're not enough, though. First off, use Mullvad, probably. Proton is kinda sus (they have collaborated with authorities and de-anonymized multiple people) Mullvad has passed the best audit I can think of: they were raided by the police, nothing was found, because they don't store anything. Simple as. Why VPN is not enough: - You log into things that you probably logged into before using that VPN. - You log into things that are linked to an email linked to you, or other things like that (gave your name, your location or whatever in dms on that platform once maybe, or hardware details, etc). Also, cookies - the DNS is not trustworthy (use 9.9.9.9, it probably helps. At the very least it hides DNS queries from your ISP) - Doesn't help with browser fingerprinting. Do not use shit like firefox, chrome, opera, etc. Use LibreWolf, or brave. - Other stuff lol. Why TOR isn't enough: - The site you visit can still leak info - Fingerprinting again - JavaScript is cancer, deactivate it - more. You should ABSOLUTELY use a VPN and sometimes TOR in this day and age but you shouldnt expect to be safe because of this. You must do more than just that.

7 - Your phone is likely not secure. I don't care if you run Graphene or if you're one of the outcasts who pretend to be safe by virtue of being on iOS, a marketing lie. Don't use your phone wherever possible. If cub, lol, shota is illegal in your area, never use your phone for this. You should still make it as secure as possible, by using a secure ROM (Graphene isn't bad, though giving money to google definitely is) and by getting rid of any google shit in general, encrypting your device, having it reboot once a day automatically in case its stolen/taken from you, deactivate face/finger print unlocks, etc. You're a furry, so you probably use it for telegram etc. Someone could, in all likelihood, gain access to everything through your phone. Dont store cub, automatically delete cache, etc.

8 - Dont use AI lol if you do, run it locally

9 - Telegram - you're a furry. You probably use TG. TG is not secure. Durov is not trustworthy. Telegram shares data with the police, unprompted (no need for a judges warrant, they do it of their own volition, all the while Durov pretends to fight for free speech on his channel that you cant leave - he certainly does not talk about why he came up on the authorities radar after beating up his son, sending him to the ER. Or when he supports pro Russian parties in eastern Europe - so much for freedom). There is no encryption of public groups/DMS. Telegram never did that. Only secret messages work that way. Signal seems to do this, though. For everything - groups, dms, etc. Keyword is seems, dont trust it. TG absolutely will ban you for cub, lol, shota. TG will switch on you, if you reside in a place where cub, lol, shota is illegal and you appeared on the authorities radar. Telegram reveals your phone number. Your phone number is most likely tied to you. You are not an anonymous on telegram - authorities in a given country can easily demand and obtain a phone number related to a message. I can't tell you not to use TG, but you can't trust TG.

10 - Coooling yourself. Use double quotes for perfect string matching. "your_name" + "cub_name", "regular_furry_name" + "cub_all_name", "cub_name" + "place_where_you_live", "cub_name" + "email", etc should be searches that you do every time once in a while. Not every day, maybe, but at least once in a while. Try various search engines. If you are going to be doxed by typical raiders, its gonna happen this way, most likely. Your email can help determine many things. Look yourself up with: - lolche - LeakCheck - Dehashed - intelX - Shrubase - HcHaha - etc.

People can find out other services where you registered. Some can be compromised. Maybe you used the same password in both places (dont do that...) Some can help find other content you posted and figure out your identity by doing a specific search adding up all that information. There's tools like Sherlock, and other scripts that will look up a given name on a ton of different sites and platforms. Use them on you. Look up if you are present in any leaked database, etc.

10 - The entire long password, different password, 2FA stuff is not a meme. 2FA stopped me from accessing stuff almost all the time when I was doing mrim on my dorms network

11 - You're American? I'm not, so figure this one out yourself - there's shit tons of people being doxed by voter reports or other shit like that

12 - Lie on fucking everything. Make decoys, too. Fake dates of births, fake names, fake fucking everything. Make a fake as LinkedIn. Put fake ass stuff there. Make it look realistic. Drop a link to it somewhere. Let dicos dox the fake you. Make fake EG2is, twitter, inkbunny... have random tame ass stuff, never use the account again, make a completely different one with a completely made up name, use that non correlated account day to day.

13 - Dont use windows lol

14 - I ran out of characters

Wordswordswords nigga get 'oxxed KEEEEEEEEEEEEEE

Trail of Evidence

Main Trail

On his inkbunny account, he links some other accounts under the name “Grawlee”, which is the name of his fursona – i.e his main self-insert character. Searching this name uncovers some older accounts under that alias. Also, in a journal on inkbunny around 2015, he mentions that he has another alias that he wants to keep separate from his extreme stuff.

Searching “*grawlee*” before:2015 on google brings up a [Weasyl account](#) under the name “iakhot”, which has art depicting the same “grawlee” dragon character used in his current art, and matching info in the about section (French, born 5 Nov 1991 – matches inkbunny journal [here](#) which was posted 5 Nov 2022 where he states he turned 31). It is definitely the same person.

Searching the name “iakhot” brings up various accounts, including [one on DeviantArt](#). In various posts on this account, he mentions having a main account that he wants to keep separate from his iakhot one. After some searching, [this post](#) was uncovered which compares the two accounts. He believed that it was invisible to non-watchers, but it was public. In this post, he gives the name of his main account – **Tohkai**. Note that “iakhot” is just “tohkai” spelled backwards, further confirming that both accounts belong to the same person.

Figure 4: Old username

While this account has been deleted and no archives exist, searching the username on breach search sites bring up a few results:

▼ source	Deezer
categories	music,media
city	Surat
country	FR
dateofbirth	1991-11-05 00:00:00.0000000
email	sushi-power@hotmail.fr
username	tohkaï
firstname	Font
lastname	Karel
gender	M

registration_date	2009-04-23 00:00:00.0000000
name	Font Karel
domain	hotmail.fr

Figure 5: Note that the DoB and country match those given on his accounts

This was enough to get a name – **Karel Font**, as well as other information given in the Doxx section. This is far from the only evidence, please see the following subsection.

Supporting Evidence

Employment

Searching the name “Karel Font” on linkedin brings up one matching result (here), which has several CVs uploaded.

 <h1>KAREL FONT</h1> <p>Firmware developer</p>	
<p>CAREER OBJECTIVE</p> <p>Embedded C developer with 5+ years of experience in security-critical embedded systems. Specialized in firmware development for constrained devices, with hands-on expertise in C, Python, and hardware integration. Based in Nordjylland, seeking a long-term role.</p>	<p>CONTACT</p> <p>Phone 23 95 50 88</p> <p>Email karel.font@gmail.com</p> <p>LinkedIn linkedin.com/in/karel-f-b73302a4/</p> <p>Danish language beginner Driving license & vehicle</p>

Development of the software used to interface with this device, in Python. <p>Developer 07/2022-03/2023 Naval Group as part of CELAD, St-Tropez</p> <ul style="list-style-type: none"> Wrote and revised testing specifications for a classified system in C & C++ Wrote multiple tests according to specifications. Debugging known issues on classified systems. <p>Developer 07/2019 - 03/2022 Infiniti, Paris</p> <ul style="list-style-type: none"> Development of the firmware for a wearable device worn by workers for garbage collection and urban cleanliness, in C. Development of the tools needed to interface with this device, in Python Auxiliary work on unrelated prototypes in the same company. <p>Intern Developer Pre 2019 Multiple companies and places</p> <ul style="list-style-type: none"> Internship at Make it Digital (Web, Marseille) – 2014 Internship at Index Education (Delphi/Pascal) – 2017 End of studies internship at Infiniti, pre hire (C) - 2019 	<p>EDUCATION</p> <p>European Institute of Technology (EPITECH) Class of 2019 Marseille & Paris <i>Titre d'expert en technologies de l'information (Master's degree equivalent)</i></p> <p>3 Years of intensive low level projects 2 Years of skill diversification, notably management 1 Year in Canada</p> <p>RELEVANT SKILLS</p> <p>French, English, learning Danish C, C++98 Python C# STM32, ESP32 Linux Jira, gitlab, coberta, trello, confluence Delphi Java</p> <p>INTERESTS</p> <p>Motorcycling, cars 3D printing Drawing</p>
<p>MILITARY SERVICE</p> <p>Cavalier Embarqué From 2012 to 2013 4^{ème} Régiment de Dragons, Carpiagne, France</p> <p>One year of voluntary service in the French Armed forces. Armored scouting unit with radio operator speciality.</p>	

Note the following correlations:

- Lived in France, now in Denmark
- Email listed on CV is linked to username "Tohkai" in databreaches:

▼ source	unrealengine.com
categories	gaming,coding
username	Tohkai
email	karel.font@gmail.com
password	6f2b713d54a74febb23a7cab7addf013
salt	37*6Wg85fyAT0Qm%C@R5X)Ex6%ylyM
domain	gmail.com

- Interested in drawing
- Works as an embedded systems software dev, as stated in the comments under his OPSEC guide [here](#)
- Served in the french military, as stated [here](#)
- Studied in Canada for one year, as stated [here](#)
- Lost his job in March 2023, stated [here](#)
- Owns a motorcycle, stated [here](#)

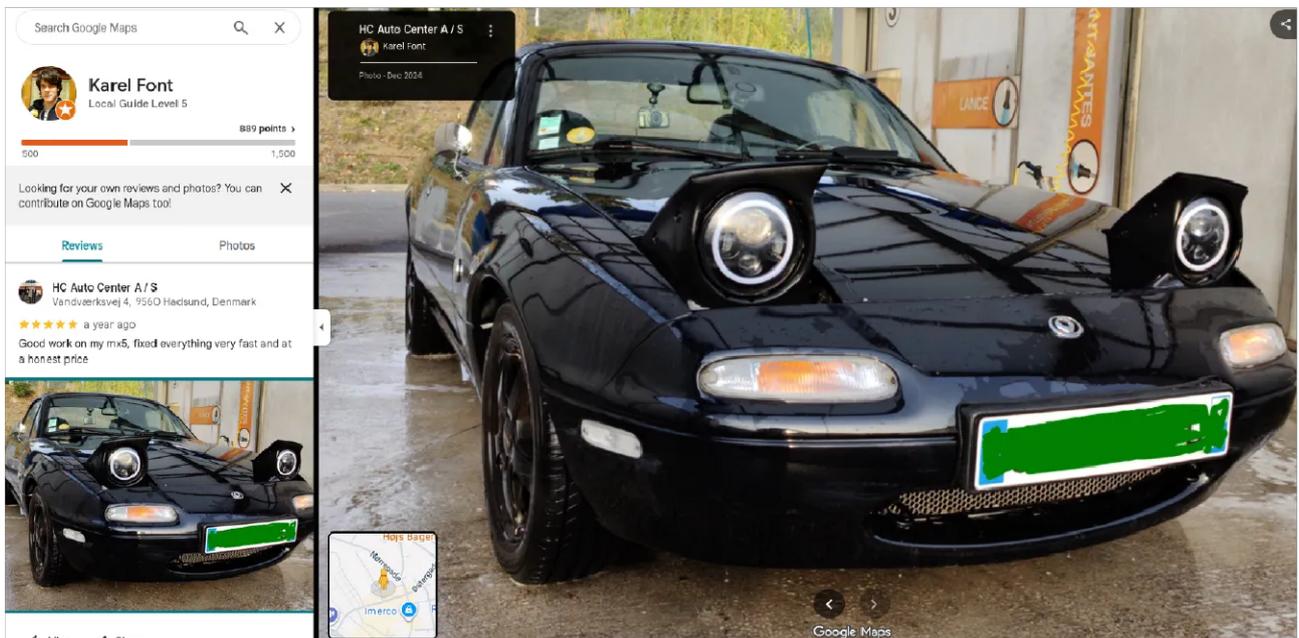

- Went through multiple internships, stated [here](#)
- “Trello” is listed under the skills section, which he uses to track his art commissions

Vehicles

The email “karel.font@gmail.com” is linked to a [google maps profile \(archive\)](#) which has several reviews posted. The reviews correlate with his move from france to denmark, but perhaps the most notable thing about them is the pictures he posted of his vehicles. Despite his claims of having good OPSEC, both his car and motorbike (which are very distinctive) appear in his artwork.
