To-do:

- [ ] Important:
  - [ ] Create separate documents for other languages
  - [ ] Change captions for some sources to include something similar to “A study found”, mentioning where the data came from and sample size
- [ ] Regular:
  - [ ] Grammar and spelling checks
  - [ ] Format new data
  - [ ] Add new sources
- [ ] Languages:
  - [x] ~~Spanish~~
  - [x] ~~French~~
  - [ ] German
  - [x] ~~Italian~~
  - [x] ~~Russian~~
  - [ ] Chinese
  - [ ] Arabic
  - [x] ~~Turkish~~
  - [ ] Serbian
  - [x] ~~Portuguese~~

Health

Physical Health

STDs

In the U.S., **MSM** (men who have sex with men) are **2%** of the **population,** however they make up **67%** of all new **HIV** cases (2022). **87%** of **HIV** cases among **men** were of **gay** men (2022)
https://www.hiv.gov/hiv-basics/overview/data-and-trends/statistics
Archive Link: https://archive.ph/gLK9x

Gays are up to **109** times as **likely** to have an **STD** compared to **heterosexuals**
The **rate** of **HIV** and **Syphilis** infection is significantly **higher** among **homosexual** men
Gay men are **67** times **more likely** to have **HIV** (U.S., 2012)

Mental Health

It is known that LGBT persons generally have poorer mental health than normal people (if you don't know, you can see from the following sources). Apologists say this is due to discrimination, however, if this is true, then they have to prove that gays are discriminated against as much as the mental health statistics show. Since (as shown by the following sources), the rate of discrimination does not match the higher rate of poor mental health, the association between their mental health conditions and homosexuality are an indication of it (i.e. homosexuality) being a mental illness.

Homosexuality is Environmental, Not Genetic

A study on twins suggested zero **genetic influence on homosexuality**. “[...] the pattern of concordance (similarity across pairs) of same-sex preference for sibling pairs does **not suggest genetic influence independent of social context.**”
Regarding causation: "[...] our results support the hypothesis that less gendered socialization in early childhood and preadolescence shapes subsequent same-sex romantic preferences."
https://psycnet.apa.org/record/2002-15745-002
Archive Link: https://archive.ph/NeCzJ

A study with almost **half a million participants** found that the **gay gene doesn’t exist**, genes explain only **8%–25%** of **homosexuality**, not even a quarter at most
Also, the **study** found there is **no X chromosome association** with **homosexuality**
Also **“All measured common variants** together **explain only part** of the **genetic heritability** at the **population level** and **do not allow meaningful prediction** of an individual’s **sexual preference”**
https://pubmed.ncbi.nlm.nih.gov/31467194/
Archive Link: https://archive.ph/ftV3C

There is **no X-gene association** with **homosexuality**, there is **no "gay gene"**
https://pubmed.ncbi.nlm.nih.gov/10405456/
Archive Link: https://archive.ph/3VcKP

Xq28 is not the **“gay gene”**, it has been **debunked**
https://pubmed.ncbi.nlm.nih.gov/10213693/
Archive Link: https://archive.ph/88vOi

Homophobia is **36% genetic, higher than homosexuality.** By **pro-LGBT logic** it **should** be **considered hateful** to **stigmatise homophobia.**
https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2292426/
Archive Link: https://archive.ph/WoEk4

Black Americans are **more homophobic** than **White Americans,**
https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2974805/
Archive Link: https://archive.ph/Y8MQW
And yet, **Black Americans are more likely to identify as gay than any other group in the US**. If a large portion of the population was secretly always gay and homophobia is the reason why less people traditionally identified as gay, then Black Americans should be less likely than White Americans to identify as gay.

Transition Surgery

Danish follow up of **transgenders** found that even **after sex reassignment surgery** over **32 years** did **not** improve the **mental illness rates** and concluded that **sex reassignment** could have **negative effects** on some individuals
https://www.tandfonline.com/doi/full/10.3109/08039488.2015.1081405
Archive Link: https://archive.is/jDQ1D

A **national database analysis** of **107,583 patients** found that people with transition surgery showed **worse** symptoms of **depression, anxiety, substance use disorder, and suicidal ideation** compared to those who did not
https://pubmed.ncbi.nlm.nih.gov/39996623/
Archive Link: https://archive.ph/c37Dt

Even **after sex reassignment surgery** the levels of **depression** and **anxiety** among **transgenders stay the same**
https://www.tandfonline.com/doi/abs/10.1080/02699200600565905

CMS analysed **33 studies** on **sex reassignment surgery** and found that "the **results** were **inconsistent**, but **negative** in the **best studies**"
And
"After **careful assessment**, we identified **six studies** that could **provide useful information** (Figure 1). Of these, the **four best designed and conducted studies** that **assessed quality of life before** and **after surgery** using **validated (albeit non-specific) psychometric studies did not demonstrate clinically significant changes** or **differences in psychometric test results after GRS. (Heylens et al., 2014; Ruppin, Pfafflin, 2015; Smith et al., 2005; Udeze et al., 2008) (Appendix C Panel A and Appendix G.)**"
https://www.cms.gov/medicare-coverage-database/view/nca.aspx?NCAId=282

When comparing **psyhological functions** of **transgenders before** and **after surgery** there was **no significant positive** or **negative change** found
https://www.researchgate.net/publication/232874550_Psychological_functions_in_male-to-female_transsexual_people_before_and_after_surgery

There is **no significant difference** in **well being** between those who **undergo genital surgery** or **surgical breast augmentation** and those who **do not have these surgeries.**
https://pubmed.ncbi.nlm.nih.gov/22188877/

Copyright © 2022 Dragonary. All rights reserved.

There is **no improvement** in **psychological functioning** among **transgenders** in **6 months after surgery**.
"The **results** of the study showed that **GRS** had **no significant effect** on **functioning** as measured by **SCL-90R** within **six months** of **surgery**."
https://www.tandfonline.com/doi/abs/10.1080/14681990701882077

A longitudinal study found that **sex reassignment surger**y has **no positive effects** on **standardised measures** of **psychological symptoms, body image, self-esteem, sexuality,** and **quality of life**
https://pubmed.ncbi.nlm.nih.gov/29128275/

When **" comparing transsexuals accepted for such surgery with transsexuals after such surgery has been performed"**
Results show that **post operative group** showed **significantly higher depression** and **satisfaction** with **relationships fell** (although to a non-significant extent)
https://psycnet.apa.org/record/2001-03117-003

"There is **no conclusive evidence** that **sex change operations improve** the **lives** of **transsexuals**, with many people remaining **severely distressed** and even **suicidal after the operation**, according to a **medical review**"
"The **review** of more than **100 international medical studies** of **post-operative transsexuals** by the **University of Birmingham's Aggressive Research Intelligence Facility** (ARIF) found **no robust scientific evidence** that **gender reassignment surgery** is **clinically effective**."
https://www.theguardian.com/society/2004/jul/30/health.mentalhealth

There is **no significant difference** in **well being** between those who **undergo genital surgery** or **surgical breast augmentation** and **those who do not** have these surgeries.
https://pubmed.ncbi.nlm.nih.gov/22188877/

Individuals who **received sex reassignment surgery** and had an **emergency visit** are **associated** with a **1200% higher suicide attempt risk** compared to adults with **emergency visits** but **did not receive surgery** and are **associated** with a **470% higher suicide attempt risk** compared to adults with **emergency visits, tubal ligation** or **vasectomy,** but **no gender-affirming surgery**
https://www.cureus.com/articles/201512-risk-of-suicide-and-self-harm-following-gender-affirmation-survery#!/

Sex reassignment does not improve rates of **psychopathology** among **transgenders**
https://pubmed.ncbi.nlm.nih.gov/11089727/

Mental illness rates among **transgenders** are **high,**and this is true for **all stages of transition (no transition, hormones, postoperative)**
https://pubmed.ncbi.nlm.nih.gov/15865950/

Copyright © 2022 Dragonary. All rights reserved.

A **study** found that **sex reassignment surgery** in **transsexuals** is "**not the treatment of choice**", and had **no positive effect** but there was "**progressive** level of **psychological dysfunction**"
https://pubmed.ncbi.nlm.nih.gov/3998721/

Sex reassignment surgery **confers no objective advantage** in terms of **social rehabilitation** as **compared** with a group of **individuals who sought sex reassignment** but **remained unoperated upon follow-up.**
https://pubmed.ncbi.nlm.nih.gov/464739/

Having **undergone sex reassignment surgery** was **not associated** with **better quality of life** or **mental health outcomes**
https://pubmed.ncbi.nlm.nih.gov/23943260/

After sex reassignment surgery, there was a **trend** of **worsening state of well-being** over a **5 year follow up**
https://pubmed.ncbi.nlm.nih.gov/28603386

Hormones weren't associated with **better mental health**, but instead "**trans men currently using cross-sex hormones** scored on average **poorer on bodily pain and mental health**, compared to **non-users**."
https://pubmed.ncbi.nlm.nih.gov/25270637/

Persons with **transsexualism**, after **sex reassignment**, have considerably **higher risks** for **mortality**, **suicidal behavior**, and **psychiatric morbidity**. Findings suggest that **sex reassignment**, although alleviating **gender dysphoria**, may **not suffice** as **treatment** for **transsexualism**
https://journals.plos.org/plosone/article?id=10.1371/journal.pone.0016885

"The **most thorough follow-up of sex-reassigned people** — extending **over thirty years** and **conducted in Sweden**, where the culture is **strongly supportive of the transgendered** — documents their lifelong mental unrest. Ten to fifteen years after surgical reassignment, the **suicide rate** of **those who** had **undergone sex-reassignment surgery** rose to **twenty times that of comparable peers**." - Dr. Paul McHugh, former Johns Hopkins Psychiatrist in Chief
https://www.thepublicdiscourse.com/2015/06/15145/

20% stopping rate, 18% complication rate, 37% had **hormone levels** found to be **out of target range during** the course of **treatment**
https://www.mdpi.com/2227-9032/10/1/121

Transgender Surgery Provides **No** Mental Health Benefit
https://www.thepublicdiscourse.com/2020/09/71296/

Copyright © 2022 Dragonary. All rights reserved.

"**15 years after sex reassignment** operation, **quality of life** is **lower** in the domains of **general health**, **role limitation**, **physical limitation**, and **personal limitation**."
https://pubmed.ncbi.nlm.nih.gov/18990387/

After surgery 47% are **dependent on social support** compared to **41% before surgery**
https://pubmed.ncbi.nlm.nih.gov/9075286/

Males who undergo "**gender-affirming orchiectomies**" (surgical removal of the testicles) have a **26.5 times higher rate of testicular cancer.**
https://meridian.allenpress.com/aplm/article/doi/10.5858/arpa.2024-0218-OA/503894

50% of **sex reassignment patients** for just **vaginoplasty** have **complications**, and **14%** have **major and severe complications**
https://bjui-journals.onlinelibrary.wiley.com/doi/abs/10.1046/j.1464-410X.2001.02323.x

20% of **sex reassignment patients** have **severe complications after surgery**
https://www.thieme-connect.de/products/ejournals/abstract/10.1055/s-0030-1262718

A longitudinal **study found** that **sex reassignment surgery** had **no positive effects on** standardised measures of **psychological symptoms**, **body image**, **self esteem**, **sexuality**, and **quality of life.**
https://pubmed.ncbi.nlm.nih.gov/29128275/

This study evaluates the **risk** of **suicide** or **self-harm** associated with **gender affirmation** procedures. **Individuals** who underwent **gender-affirming surgery** had a **12.12-fold higher suicide attempt risk** than those who did not (**3.47%** vs **0.29%**)
https://pubmed.ncbi.nlm.nih.gov/38699117/

This study examined **13 male-to-female** and **4 female-to-male transsexuals** in a **follow-up** (**5-20 years after** the **operation**).
The **quality of life** of the **13 MTF transsexuals** had **significantly deteriorated**. **9** depend on **social welfare**, **8** report being **unable** to **experience sexual pleasure**, **10 suffer** from **anxieties**, **depression** or **addictions**, **3 regret** the **operation** and **2** had a **second operation** for **restoration** of the **original state**.
The **4 FTM transsexuals** showed **slightly better results** with only **2 suffering** from **depression** and problems of **addiction**.
https://pubmed.ncbi.nlm.nih.gov/9789272/

The present article describes **five biological men** who have been observed in their roles as **women** for a period of **6 to 12 years** since undergoing a complete **sex change**. In none of the cases were their great expectations fulfilled. **Negative effects** of the **treatment** comprised not only of **somatic**, **sexual**, and **social complications** but above all, **psychologic difficulties** such as

Copyright © 2022 Dragonary. All rights reserved.

indirect **regret** and **suicidal thoughts**. In light of the **patients' postoperative life situations**, **sex change treatment** appears almost **counterproductive**, since the definitive **surgical treatment** they underwent **fixated** the **patients** in a **defensive position**, which **prevented** the **natural maturity** and **development** of their **own personality** into a "**true self**".
https://www.tandfonline.com/doi/abs/10.3109/08039489409084964

Follow up **6 months** after surgery **found no significant difference in anxiety, depression or body image**
https://link.springer.com/article/10.1007/s10508-017-1012-7

Social Transition

The **biggest** and **currently newest (May 2023) research** proves that **social transition (of children) DOES NOT** have a **significant positive effect** on **mental health**.
"**Overall**, there were **no significant effects** of **social transition** or **name change** on **mental health status**."
https://link.springer.com/article/10.1007/s10508-023-02588-5
Archive Link: https://archive.ph/ajE3k

Social transition of **children** does **not result** in **better mental health outcomes**
"The **degree** of **social transition** did **not significantly predict** the **outcome**. Therefore, **claims** that **gender affirmation** through **transitioning socially** is **beneficial** for **children** with **GD** could **not be supported** from the **present results**."
https://pubmed.ncbi.nlm.nih.gov/33081539/

Surgeries On Minors

This survey of people with **post breast reconstruction surgery** found that **49% of them were younger than 18**
https://jamanetwork.com/journals/jamapediatrics/fullarticle/2674039
Archive Link: https://archive.ph/73JPx

In this chest reconstruction surgery survey **several were found to be under 18, with some even being under 16**
https://www.tandfonline.com/doi/full/10.1080/15532739.2017.1349706

Transgenders in Sports

Sources on the advantages men have when participating in female sports. To avoid confusion: "man" refers to a real man, "transman" refers to a woman who identifies as a man. "Woman" refers to a real woman, "transwoman" refers to a man who identifies as a woman.

After transwomen (i.e. biological men) and transmen (i.e. biological women) both underwent **12 months of cross sex hormone therapy**, **transwomen still** ended up being **stronger than transmen**, **in** both **absolute** and **height adjusted values**
https://academic.oup.com/jcem/article/105/3/e805/5651219

Transwomen retain **greater muscle strength** than **women** even after **36 months** of **hormone therapy**
https://bjsm.bmj.com/content/55/15/865

The **biological advantage** that **transgender** "**women**" have **over women** is **only minimally reduced when testosterone is suppressed** as per current sporting guidelines for transgender athletes
https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7846503/

"**Transwomen still** had a **9% faster mean run speed after** the **1 year** period **of testosterone suppression** that is **recommended by World Athletics** for inclusion in women's events."
https://bjsm.bmj.com/content/55/11/577.full?ijkey=yjlCzZVZFRDZzHz&keytype=ref

A **systematic review** found an **almost null change in strength** after **transition from male to female** "In **male-to-females (MtFs)** the results of the muscle strength analysis were more controversial, but the pooled estimate effect showed a decrease: **−3.6%** (95% confidence interval [CI] −6.6; −0.6)."
https://www.scielo.br/j/rbme/a/CDkTksYcMPcKYTHGfcJLX4K/

"[Biological] **women** have **smaller conducting airways** than **men**, **even when matched for lung size**. This is important when considering the principles of airflow [...]"
https://journals.physiology.org/doi/full/10.1152/advan.00118.2006

"**Men** have **significantly greater left ventricular mass** and **chamber size than women**. Because the left ventricular ejection fraction is the same in both sexes, the **stroke volume** is **larger in men than in women**."

Copyright © 2022 Dragonary. All rights reserved.

https://journals.physiology.org/doi/full/10.1152/advan.00118.2006

At least around **900 medals** have been de facto **stolen** by **male trans athletes** from **women** in **women's sports**, across **hundreds of competitions** and **dozens of sports**
https://www.ohchr.org/en/documents/thematic-reports/a79325-report-special-rapporteur-violence-against-women-and-girls-its

Systematic review found that after **transition**, those who transition from men to women, **still have the same bone density as men, and have only a small effect on bone density of lumbar spine.**
"In trans women, mean BMD difference was **not significant** vs. natal men at femoral neck, total femur, and lumbar spine in cross-sectional studies;" ... "In transgender women, only lumbar spine BMD seemed to be affected after CSHT"
https://www.researchgate.net/publication/331793651_Bone_Mass_Effects_of_Cross-Sex_Hormone_Therapy_in_Transgender_People_Updated_Systematic_Review_and_Meta-Analysis

MtF transgenders have **male knee injury rates** after **cross-sex hormone therapy**
"Subgroup analysis showed **significantly higher incidence of knee injuries** among cisgender men (5.6%) versus cisgender women (4.1%) (p = 0.042) and among transgender women (6.6%) versus cisgender women (4.1%) (p = 0.005)."
https://www.mdpi.com/1660-4601/20/22/7060

Trans Genocide MYTH

Only **32 transgender** people have been **killed** in the **US** in **2022**. The **trans murder rate** is about **2**.
https://abcnews.go.com/Health/wireStory/report-32-transgender-people-killed-us-2022-93408263
Archive Link: https://archive.ph/gWto2

In contrast the estimated murder rate in **2022** for the **general population** is **6.45**. Thus **trans** people are **3 times less likely to be killed** than the **average American**.
https://williamsinstitute.law.ucla.edu/wp-content/uploads/Trans-Pop-Update-Jun-2022.pdf

Most murder cases of **trans** people involve either **domestic violence within LGBT** or **high risk lifestyles** like **sex work** and **high rates of STDs**
https://thefederalist.com/2019/11/04/the-left-is-lying-about-a-hatred-and-violence-epidemic-against-transgender-people/
Archive Link: https://archive.ph/YGmvJ

"The **overall homicide rate** of **transgender individuals** was likely to be **less than** that of **cisgender individuals**"

Drug Use

Tobacco
Gay and transgender individuals use tobacco up to 200% more than those who identify as heterosexual.
Alcohol
Between 20 and 25% of the LGBTQ community have moderate to severe alcohol dependency.
Marijuana
Gay men are 3.5 times more likely to use Marijuana than straight males.
Amphetamines
Members of the LGBTQ community are 12.2 times more likely to use Amphetamines.
Heroin
LGBTQ individuals are 9.5 times more likely to use Heroin than heterosexual individuals.

LGBT are **3** times **more likely** to use **heroin**
LGBT are **4** times **more likely** to use **methamphetamine**
LGBT are **3** times **more likely** to have **marijuana** use disorder
LGBT are **2** times **more likely** to have **alcohol** use disorder
LGBT are **2** times **more likely** to **smoke**
About **20% – 30%** of **LGBT** abuse **substances** in their life over **3** times **more** than **heterosexuals**
15% of **LGBT** had **alcohol** or **drug use DISORDER** in the **LAST YEAR** only, over **2** times **more** than **heterosexuals**
https://healthyliferecovery.com/mental-health-addiction-in-lgbtq/

41.3% of **homosexuals 18 and older** reported **past-year marijuana use**, compared to **18.7%** of the **normal adult population**
6.7% of homosexuals in 2020 **misused opioids (prescription opioids or heroin use)** in the **past year,** compared to **3.6%** of the **overall adult population**
The **NSDUH survey** also found that, **in 2020**, approximately **21.8%** of **homosexuals** had an **alcohol use disorder** in the **past year**, compared to **11.0%** in the **overall population**
Bisexual men and **women** are **more likely** to use **tobacco and e-cigarettes** than **heterosexual men** and **women**
https://nida.nih.gov/research-topics/substance-use-suds-in-lgbtq-populations

LGB adolescents reported **2.89 higher rates** of **substance use** compared to **heterosexual youth**
https://pubmed.ncbi.nlm.nih.gov/18339100/

Homosexuals are **more likely** to use **illegal drugs** and **drink** to **excess** than **straight** people
https://www.cdc.gov/msmhealth/substance-abuse.htm

LGBTQ+ adults are **56% more likely** to develop an **alcohol use disorder** and **3** times **more likely** to develop another **substance disorder**
https://www.samhsa.gov/data/report/2015-2016-nsduh-sexual-orientation-summary-sheets

33% of **homosexuals** have **depression,23%** have **lifetime conduct disorder,20%** are **drug addicts,** and **10%** of them have **nicotine addiction**
https://pubmed.ncbi.nlm.nih.gov/25294230/

Lesbians are **more likely** than **heterosexual women** to **smoke**
https://pubmed.ncbi.nlm.nih.gov/12734037/

"There were **clear hazardous drinking disparities** between **sexual minority individuals** and **heterosexual individuals** over time. During **adolescence**, **sexual minority individuals**, particularly **females**, reported **higher levels** of **hazardous drinking**. As study participants reached **adulthood**,

Copyright © 2022 Dragonary. All rights reserved.

the **magnitude** of the **hazardous drinking disparities increased** among **sexual minorities**, **sexual minority men** in particular."
https://pubmed.ncbi.nlm.nih.gov/23325141/

In comparison with the **female population**, **lesbians/bisexual women** exhibit **greater prevalence rates** of **obesity, alcohol use,** and **tobacco use.**
https://pubmed.ncbi.nlm.nih.gov/11291371/

Prison

Men in **prison** are **5** times **more likely** to be **gay** and **42%** of **women** in **prison** are **lesbians**, meaning that being in **prison** has **correlation** with **homosexuality**
https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5227944/
Archive Link: https://archive.ph/bQTv2

Prison population is **overwhelmingly comprised** of **LGBT** compared to general population

Of the **125 transgender prisoners** counted by the prison service in 2017, **60 had been convicted of sexual offenses, including 27 convicted of rape**
https://files.catbox.moe/bfiv3n.pdf

Pedophilia

A literature review of **19 studies** found that **Homosexuals and Bisexuals** are between **12-16 times more likely** to **molest children**, while **homosexual and bisexual educators** account for **80%** of **molestation** of **pupils** and are **90-100 times more likely** to **molest pupils**
https://www.ojp.gov/ncjrs/virtual-library/abstracts/homosexual-molestation-childrensexual-interaction-teacher-and-pupil
Archive Link: https://archive.ph/2Vy9a

Homosexuals are **more likely** to be **pedophiles** and about **33%** of **child molesters** are **homosexuals** ("**ratio of sex offenders against female children vs offenders against male children is approximately 2:1**")
Whilst **specifically this study sample** found **41% — 42.5%** of **child molesters** to be **homosexual (1.35:1 heterosexual to homosexual ratio** and **conversion method 2** which found **1.44:1 heterosexual to homosexual ratio)**
https://www.tandfonline.com/doi/abs/10.1080/00926239208404356
Archive Link: https://archive.ph/pZlec

A **gigantic study** of over **4000 pedophiles** found that about **33%** of **pedophiles** are **homosexual** and many more **bisexuals**, also it found that **homosexual pedophiles** are **significantly more likely** to **reoffend** and **harder to be treated**
https://link.springer.com/article/10.1007/BF00856862
Archive Link: https://archive.ph/AWc5K

Study of **pedophiles** published in **APAs (American Psychological Association) journal** found that:
"With respect to **gender**, **455** participants (**38.3%**) said that they were **attracted only** to **females**, **420** (**35.3%**) **only** to **males**, and **314** (**26.4%**) to **both males** and **females**."
In this **largest study** of **pedophiles** ever from **APAs journal** they find that **61.7%** of **pedophiles** are **homosexual/bisexual**
https://psycnet.apa.org/doiLanding?doi=10.1037%2Fabn0000212
Archive Link: https://archive.ph/l4aWd

Approximately **one third** of **victims** of **sex offenders** are **boys**, in English **prisons** there were about **3000** sex offenders of whom only **12** were **women**, conclusion being that **female**
